F. After the Wi-Fi is connected, it will come to name the of device and enter the device Password. Please name the camera per your needs, and enter the default password

“123”, which is printed the camera body.

5.Functions instruction

1. Live view Screen Instruction

A:Mute/Unmute.

B:Enlarge to full screen.

C:Local recording:You can tab this icon to record the video to your mobile and you can review the recorded file at a later time.

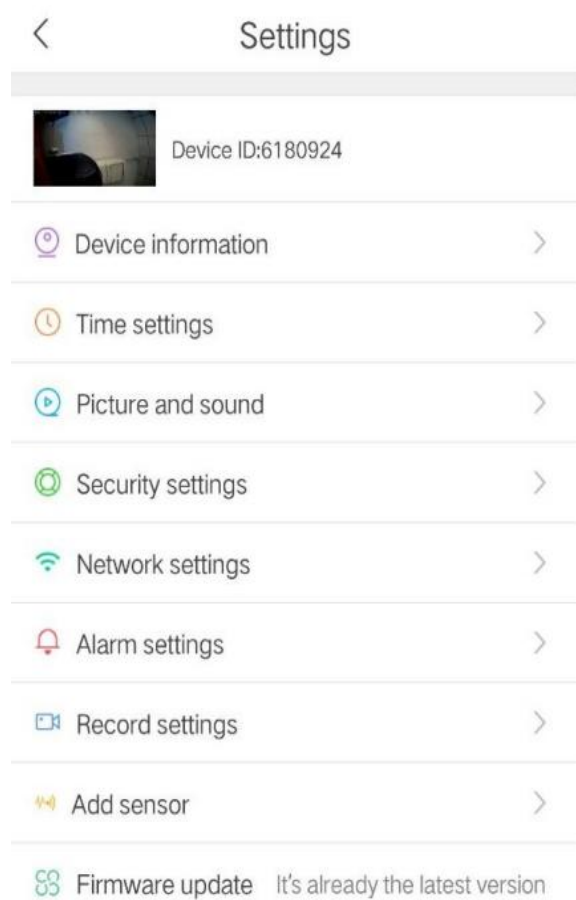

D:Two way audio.

E:Snapshot.

F:Motion detection Alarm

G:N/A. This function is not available for the camera.

2. Settings

Device information: Check device information.

Time settings: Set date/time zone.

Picture and sound: Set the video format (PAL/NTSC), volume, Motion detection on or off, Reverse image, etc.

Security settings: Modify passwords for admin And guest.

Defense settings: Not Available for this camera.

Network settings: Set the Wi-Fi connection.

Alarm settings: Set motion detection. Alarm alerts is not available.

Record setting: There are 3 recording modes to Choose. You need to insert a micro SD card first (Maximum 64GB). (The recorded file is stored to the memory card, playback only available on PC Client and mobile client). See the explanation below:

Add Sensor: Not for this camera.

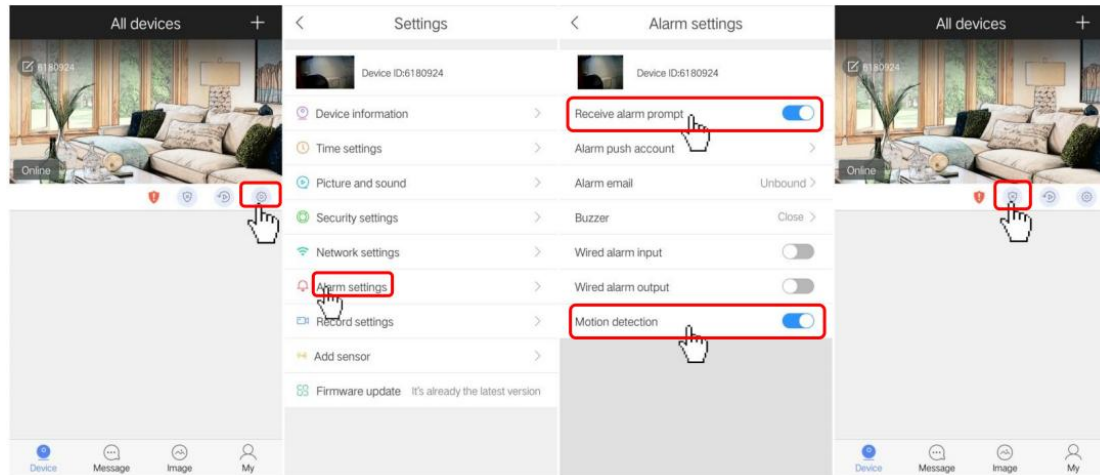

Firmware update: Do NOT upgrade the firmware Prior to contacting us. We do not recommend any Upgrade if there is no problem with the camera.

Record manually: The camera will start and stop recording only when you turn on or off the recording
Record Alarm: Record only when alarm is triggered.
Record Timer: Record per scheduled time frame.

Please notice the recording here is different from the Record icon on the Live View screen. The recordings (in this setting) will be saved to the memory card, instead of your mobile phone. On the live view screen, if you tap the recording icon (video camera icon), the recorded files will be saved to your mobile phone, not Your memory card.

3.How to Set up Alarm (Motion Detection)on your Mobile App?

Yoosee - Settings - Alarming settings: Check “Receive alarm prompt” & “Motion detection”. Go back and tab  on the live view screen.

How to set up the motion detection and receive an alarm alert?

IMPORTANT:

*Make sure to tab  icon to enable the motion detection alarm.

*If you wish to bind an email address for receiving email when movement is detected go to - [Email settings] under [Alarm Settings] - [Alarm Email]. Some email address may not be supported, we do not warrant the compatibility of all email address.

*Wired Alarm Input/Output is currently not available for this camera.

6.Instruction for PC Software Client(CMS)

1. How to Add the Camera on Your CMS:

Step 1: Connect your camera to Wi-Fi first

Power on the camera and connect it with your Wi-Fi via your mobile phone.(Please Refer to How to Connect the Camera via Mobiles Quickly)

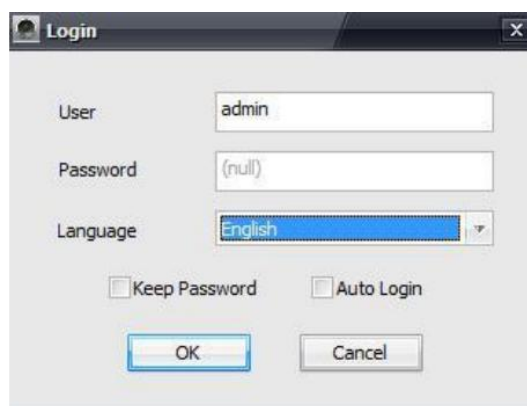

Step 2: Download the CMS software client

Go to <http://yoosee.co> and download the software client CMS (PC clients for Windows),install it to your Windows PC.

Step3:Log in and add device

Run the software client log in, default username: admin, no password, leave it blank.

Click OK.After log-in, the software will automatically scan cameras within the LAN, a dialog box will pop-up if new camera is found. See below

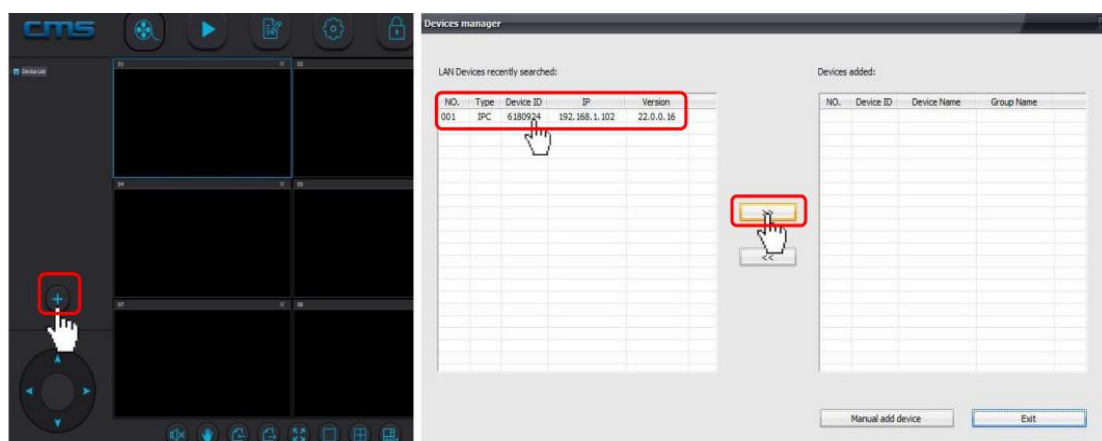

Login

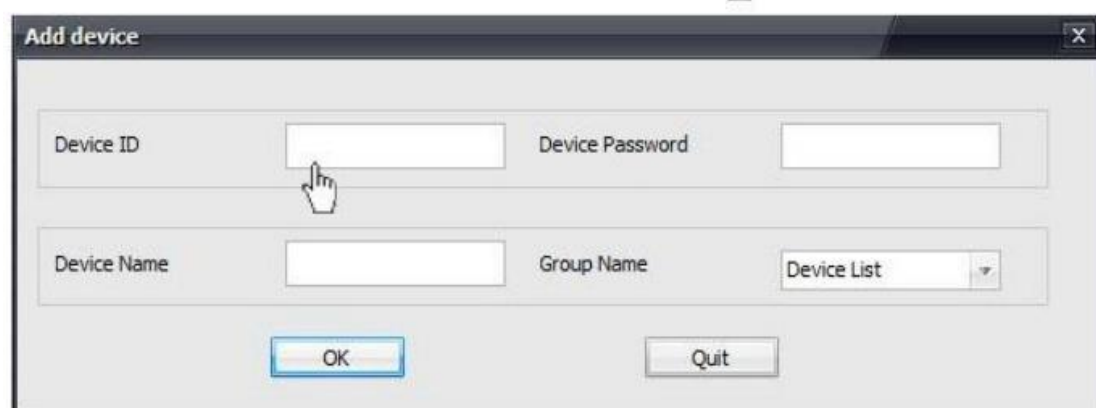

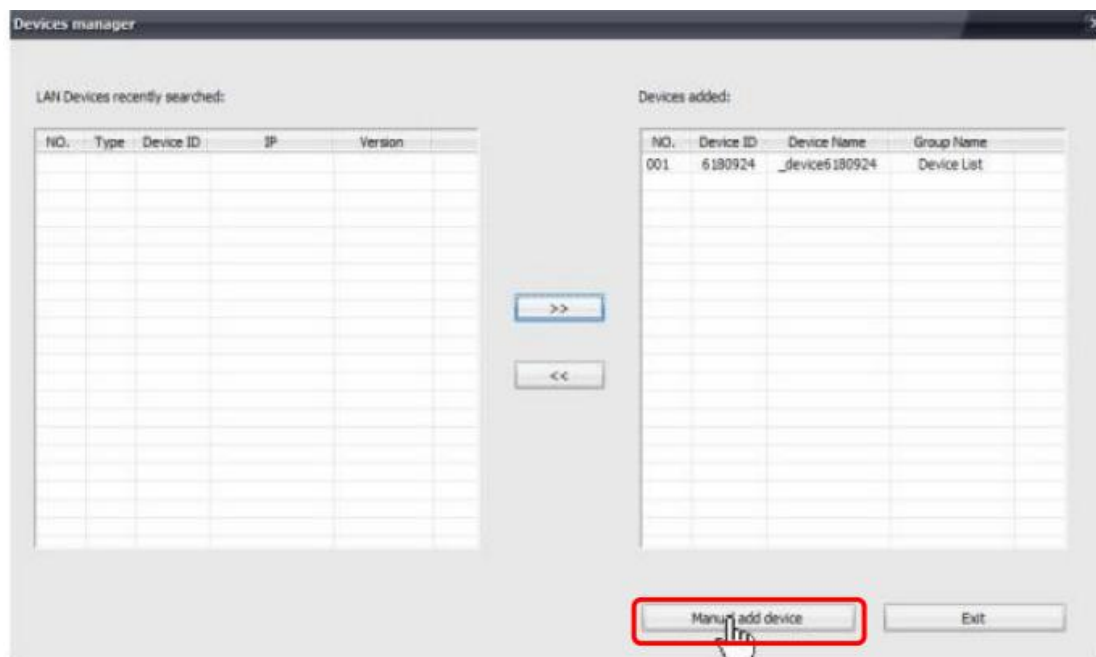

New device found

If no camera is found, you can click the “+” button to go to[Device Manager].In this dialog box, you can add the device (within LAN) by double clicking the device information, or using the>> button to add the device.

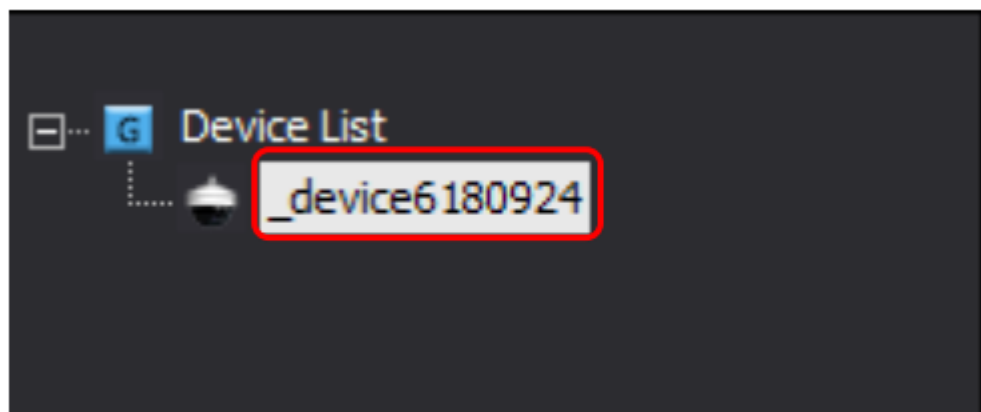

You can also click the [Manual add device] button to add your camera. Enter the [Device ID] and [Password], Name the [Device Name].Click OK to confirm.

Note: Make sure your camera is already connected to Wi-Fi if you want to access the camera on CMS.

Step 4. Once the device is added to the CMS, double click the device under [Device List] to start accessing the camera.

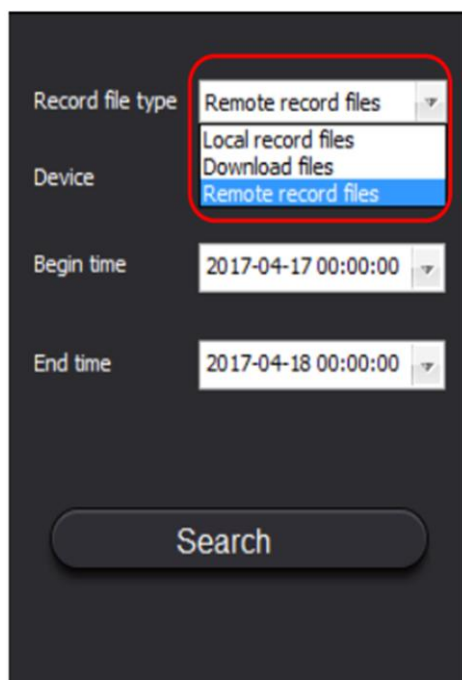

2 . How to Playback on CMS?

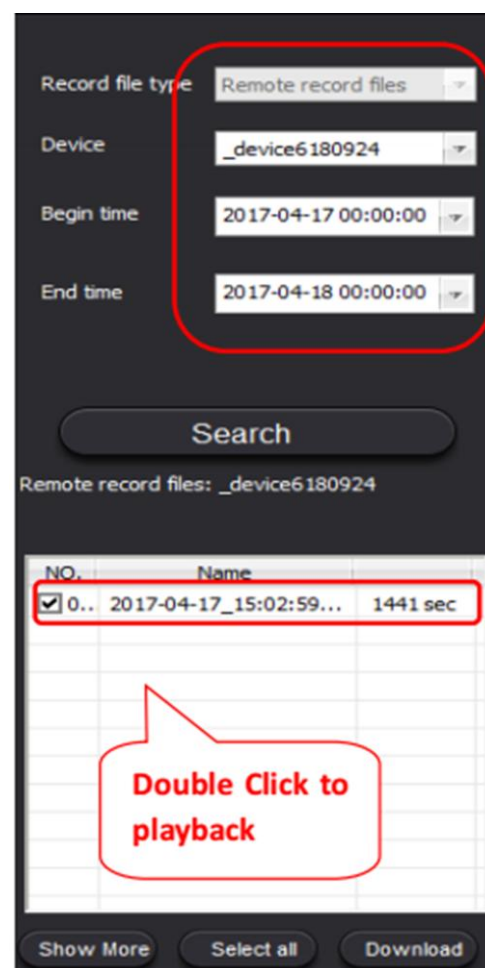

Click the [Playback] button below, choose the" Playback date"Record file type". If you want to playback the video which is recorded in the memory card,choose "Remote record files" in the drop-down menu. If you want to playback the local recored files on your PC's hard drive disk, choose "Local Record files". If you want to download the recorded files from your memory card to your PC's hard drive disk, choose "Download files". See below:

Example: Access the remote recorded files on your PC.

A screenshot of the CMS interface. The 'Record file type' dropdown menu is open, showing three options: 'Remote record files' (selected), 'Local record files', and 'Download files'. The 'Device' field is set to '_device6180924'. The 'Begin time' is '2017-04-17 00:00:00' and the 'End time' is '2017-04-18 00:00:00'. A 'Search' button is at the bottom.

Remote record files (on Memory Card)

A screenshot of the CMS interface showing the search results. The 'Record file type' dropdown is set to 'Remote record files'. The 'Device' is '_device6180924'. The 'Begin time' is '2017-04-17 00:00:00' and the 'End time' is '2017-04-18 00:00:00'. A 'Search' button is present. Below the search bar, the text 'Remote record files: _device6180924' is displayed. A table shows the search results with columns 'NO.', 'Name', and 'Duration'. The first row is checked and highlighted with a red box. A red speech bubble points to the first row with the text 'Double Click to playback'. At the bottom, there are buttons for 'Show More', 'Select all', and 'Download'.

Playback on Your PC

7.Frequently Asked Questions

1.How many ways to access the camers?

A App:Yoosee (iOS/Android).Does not support Windows phone/Amazon Kindle.

B Software client for Windows PC:CMS(YOU can downloab this from the website:
<http://yoosee.co>).The CMS does not support Mac, it supports Windows only.

Note:The camera does not support DDNS access. it does not work with 3rd party Software or APP.

2.How to factory-reset my IP Cam?

Start with the camera powered on via Power Cable,Gently insert the pin into the Reset hole, press it and hold it for several seconds until you hear the voice indicating the device has been reset.

3.I cannot access my camera wirelessly?

* Try reboot your router first

* Make sure your router runs at 2.4GHZ wireless channel only because the camera will not work with 5GHz, so if you are having a dual-band wireless router, you may need to disable the camera accepts password less than 20-character.

*Make sure there is no environmental factors that may affect the camera's wireless connectivity,i.e a large window, a large mirror, a fish tank, bathroom walls,concrete walls. Those would definitely decrease the Wi-Fi signals hence the disconnection.

*Reset the camera
